STREET FURNITURE WITH AUGMENTED FUNCTIONALITY

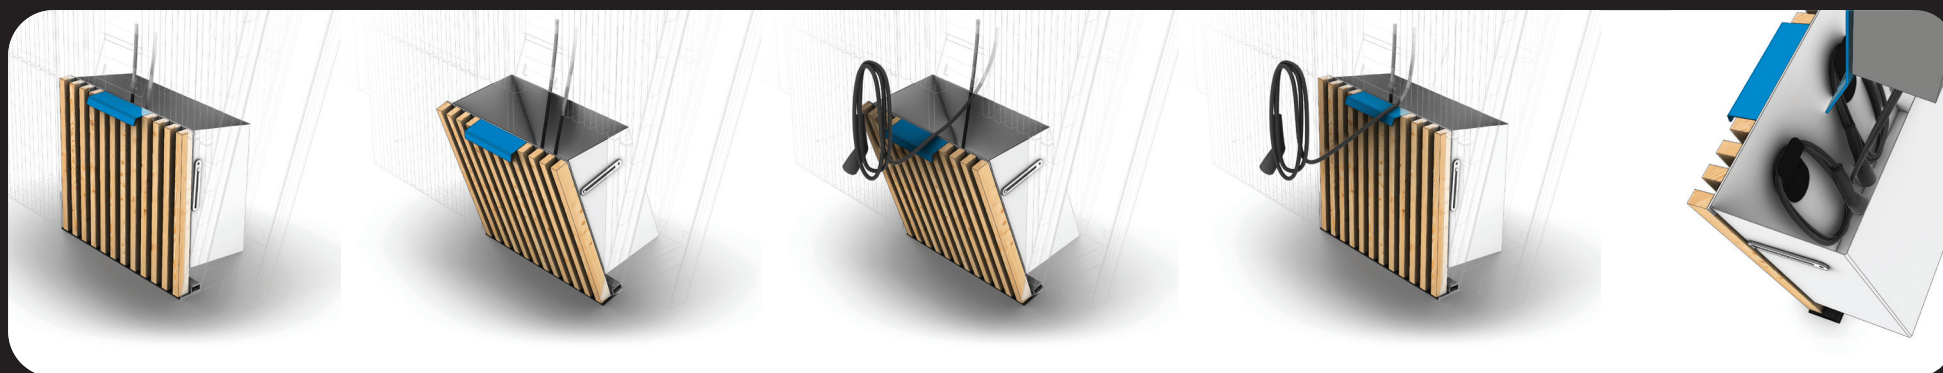

A simple shelter, yet aesthetic, clean in shape and functional. The carport with solar panels and a charging box for electric or hybrid cars is the result of collaboration with Viessmann and an example of infrastructure that is linked to our street furniture. The ingenious cable storage system in the flip-out drawer, concealed by larch slats, works with any type of architecture.

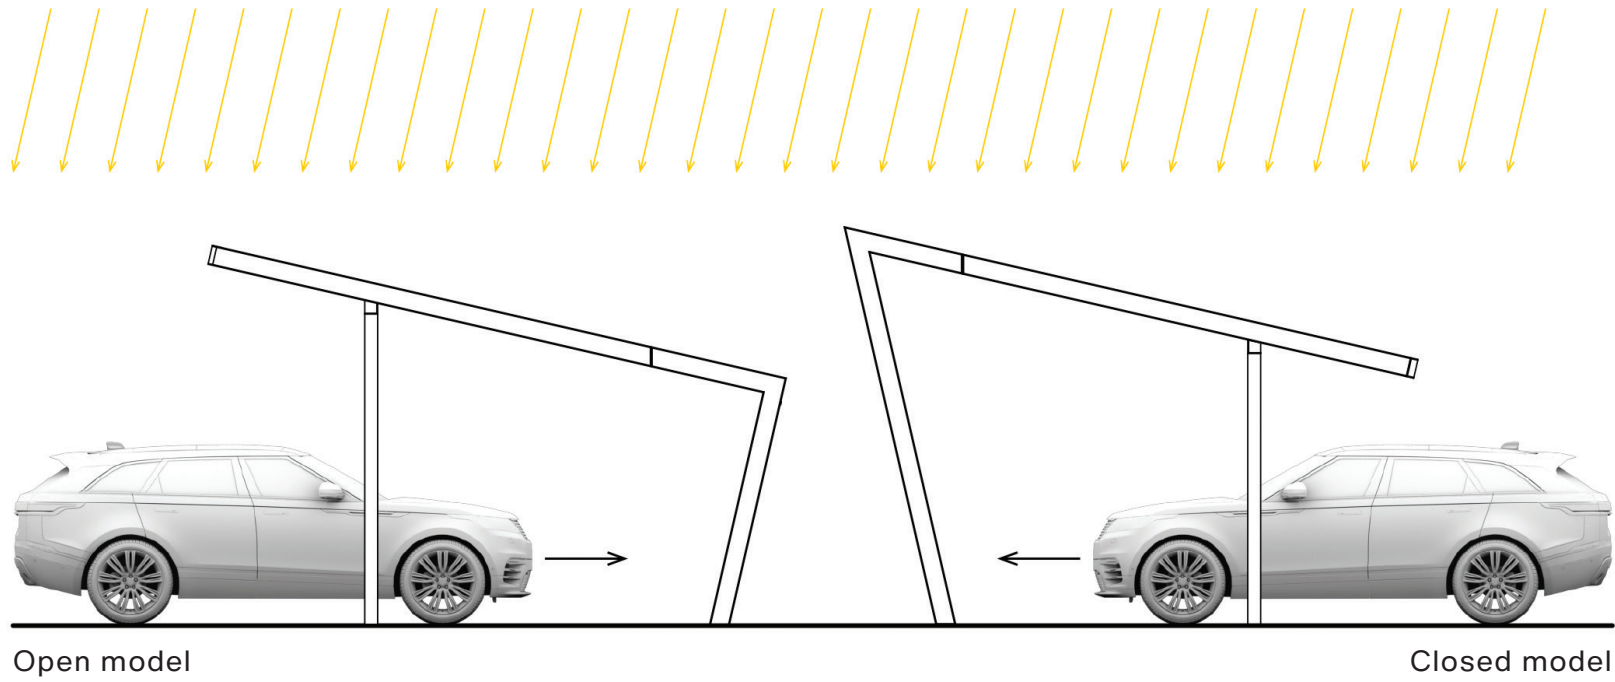

Design: David Karásek, Michael Tomalik

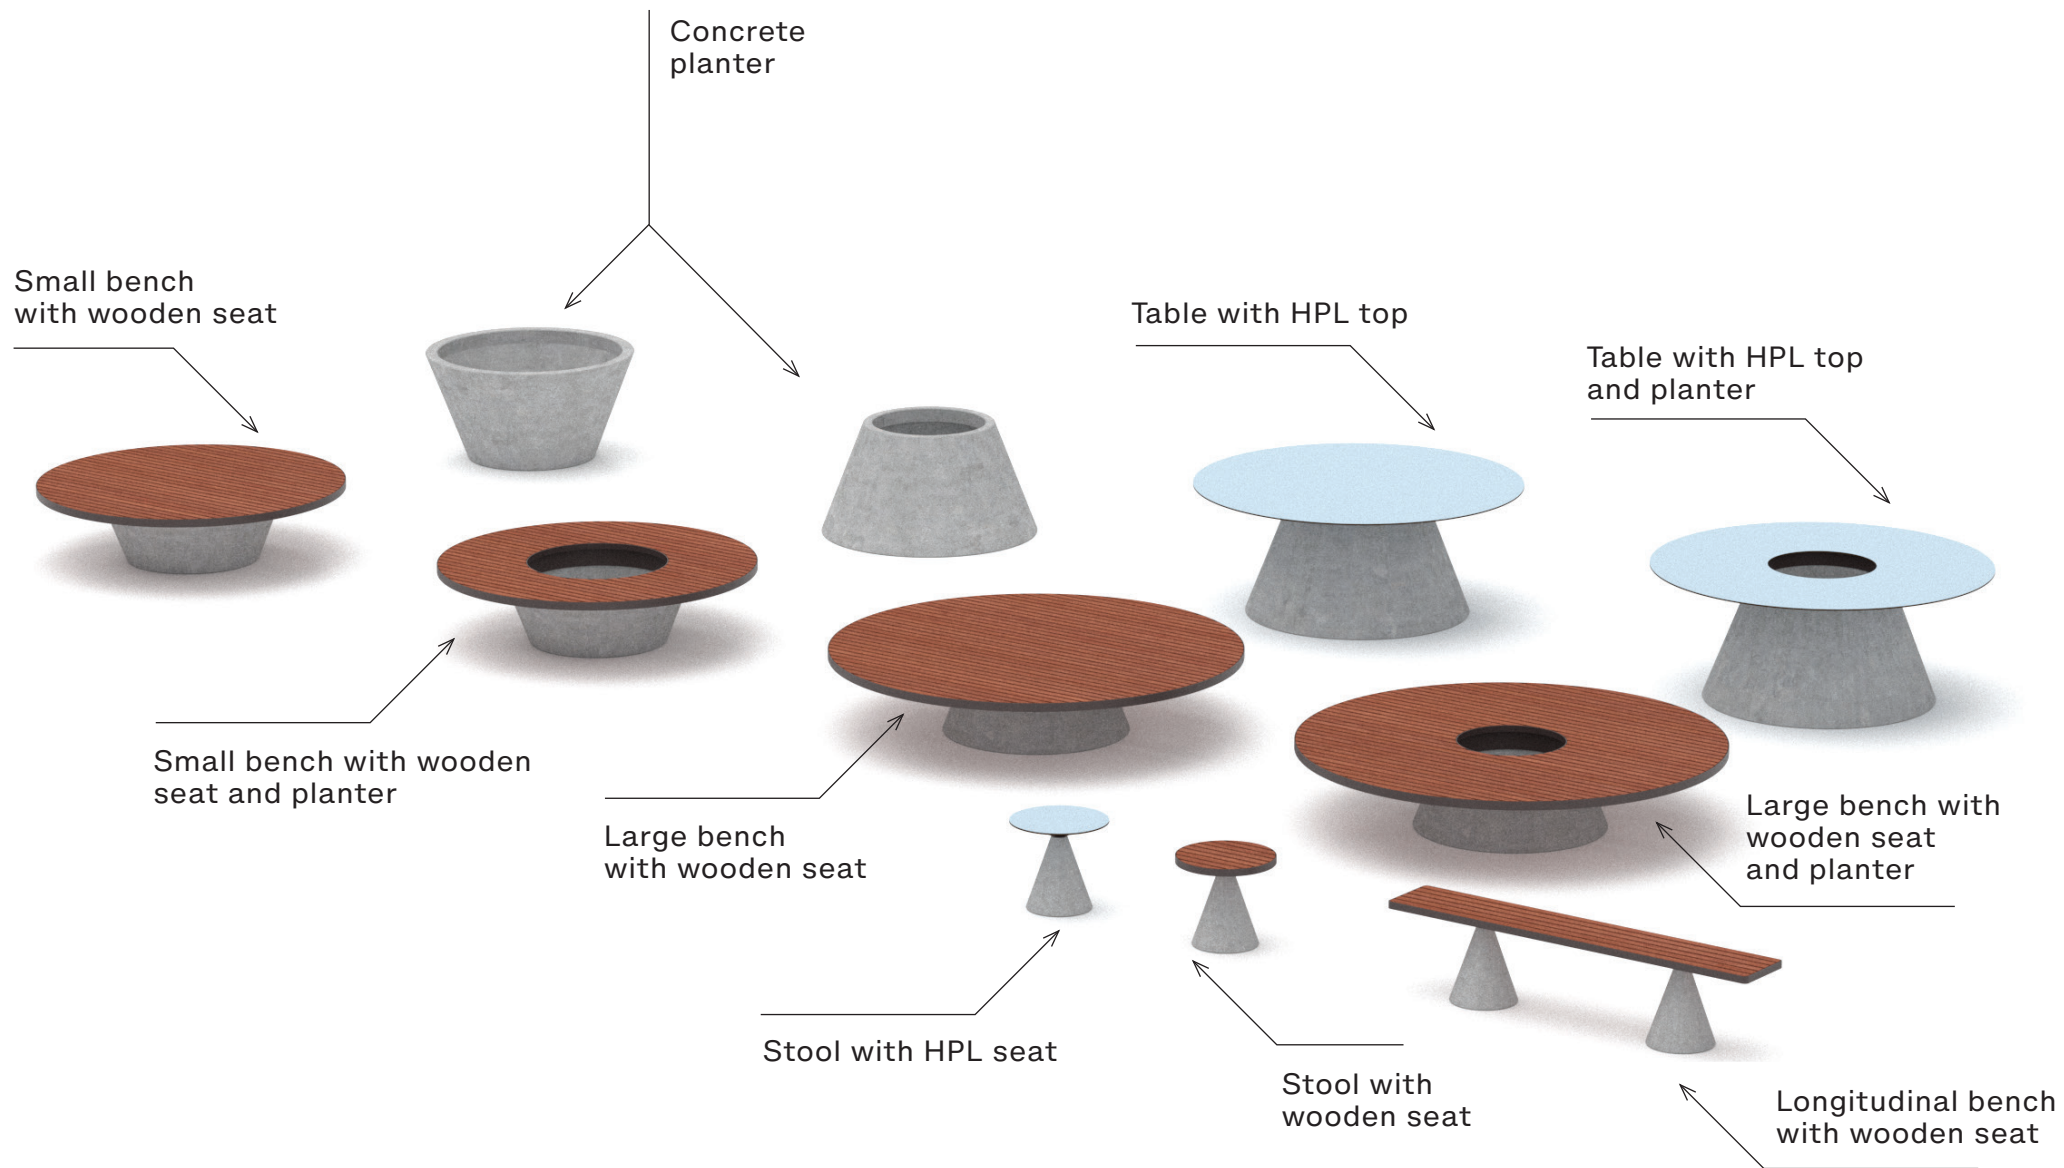

CONICS

SMART PLAY WITH CONES

Concrete, wood and steel as fundamental basics of street furniture, just like our new Conics range. Conical castings are available in three sizes and may serve as tables, seats, planters and even benches. We recommend adding tables from the Pixel series or using HPL printing technology.

Design: Herrmann & Coufal

POLYS

THE GRASS IS GREENER ON THIS SIDE

Polys modular planter system offers wide spectrum of usage, both indoors and outdoors. In the street, in the shopping mall, at school, in the office, on the terrace and at home. Everywhere there is a fresh solution to divide or make the environment more comfortable.

Design: David Karásek, Michael Tomalik

UFO

READY FOR LANDING

A new universal element for public space. A shelter that can land gracefully above most of our products.

The textile dome, supported by fibreglass rods, is easy to install and is the result of our quest for a highly functional parasol and umbrella in one.

Design: David Karásek, Michael Tomalik

NUBO

GROWTH IS CHANGE

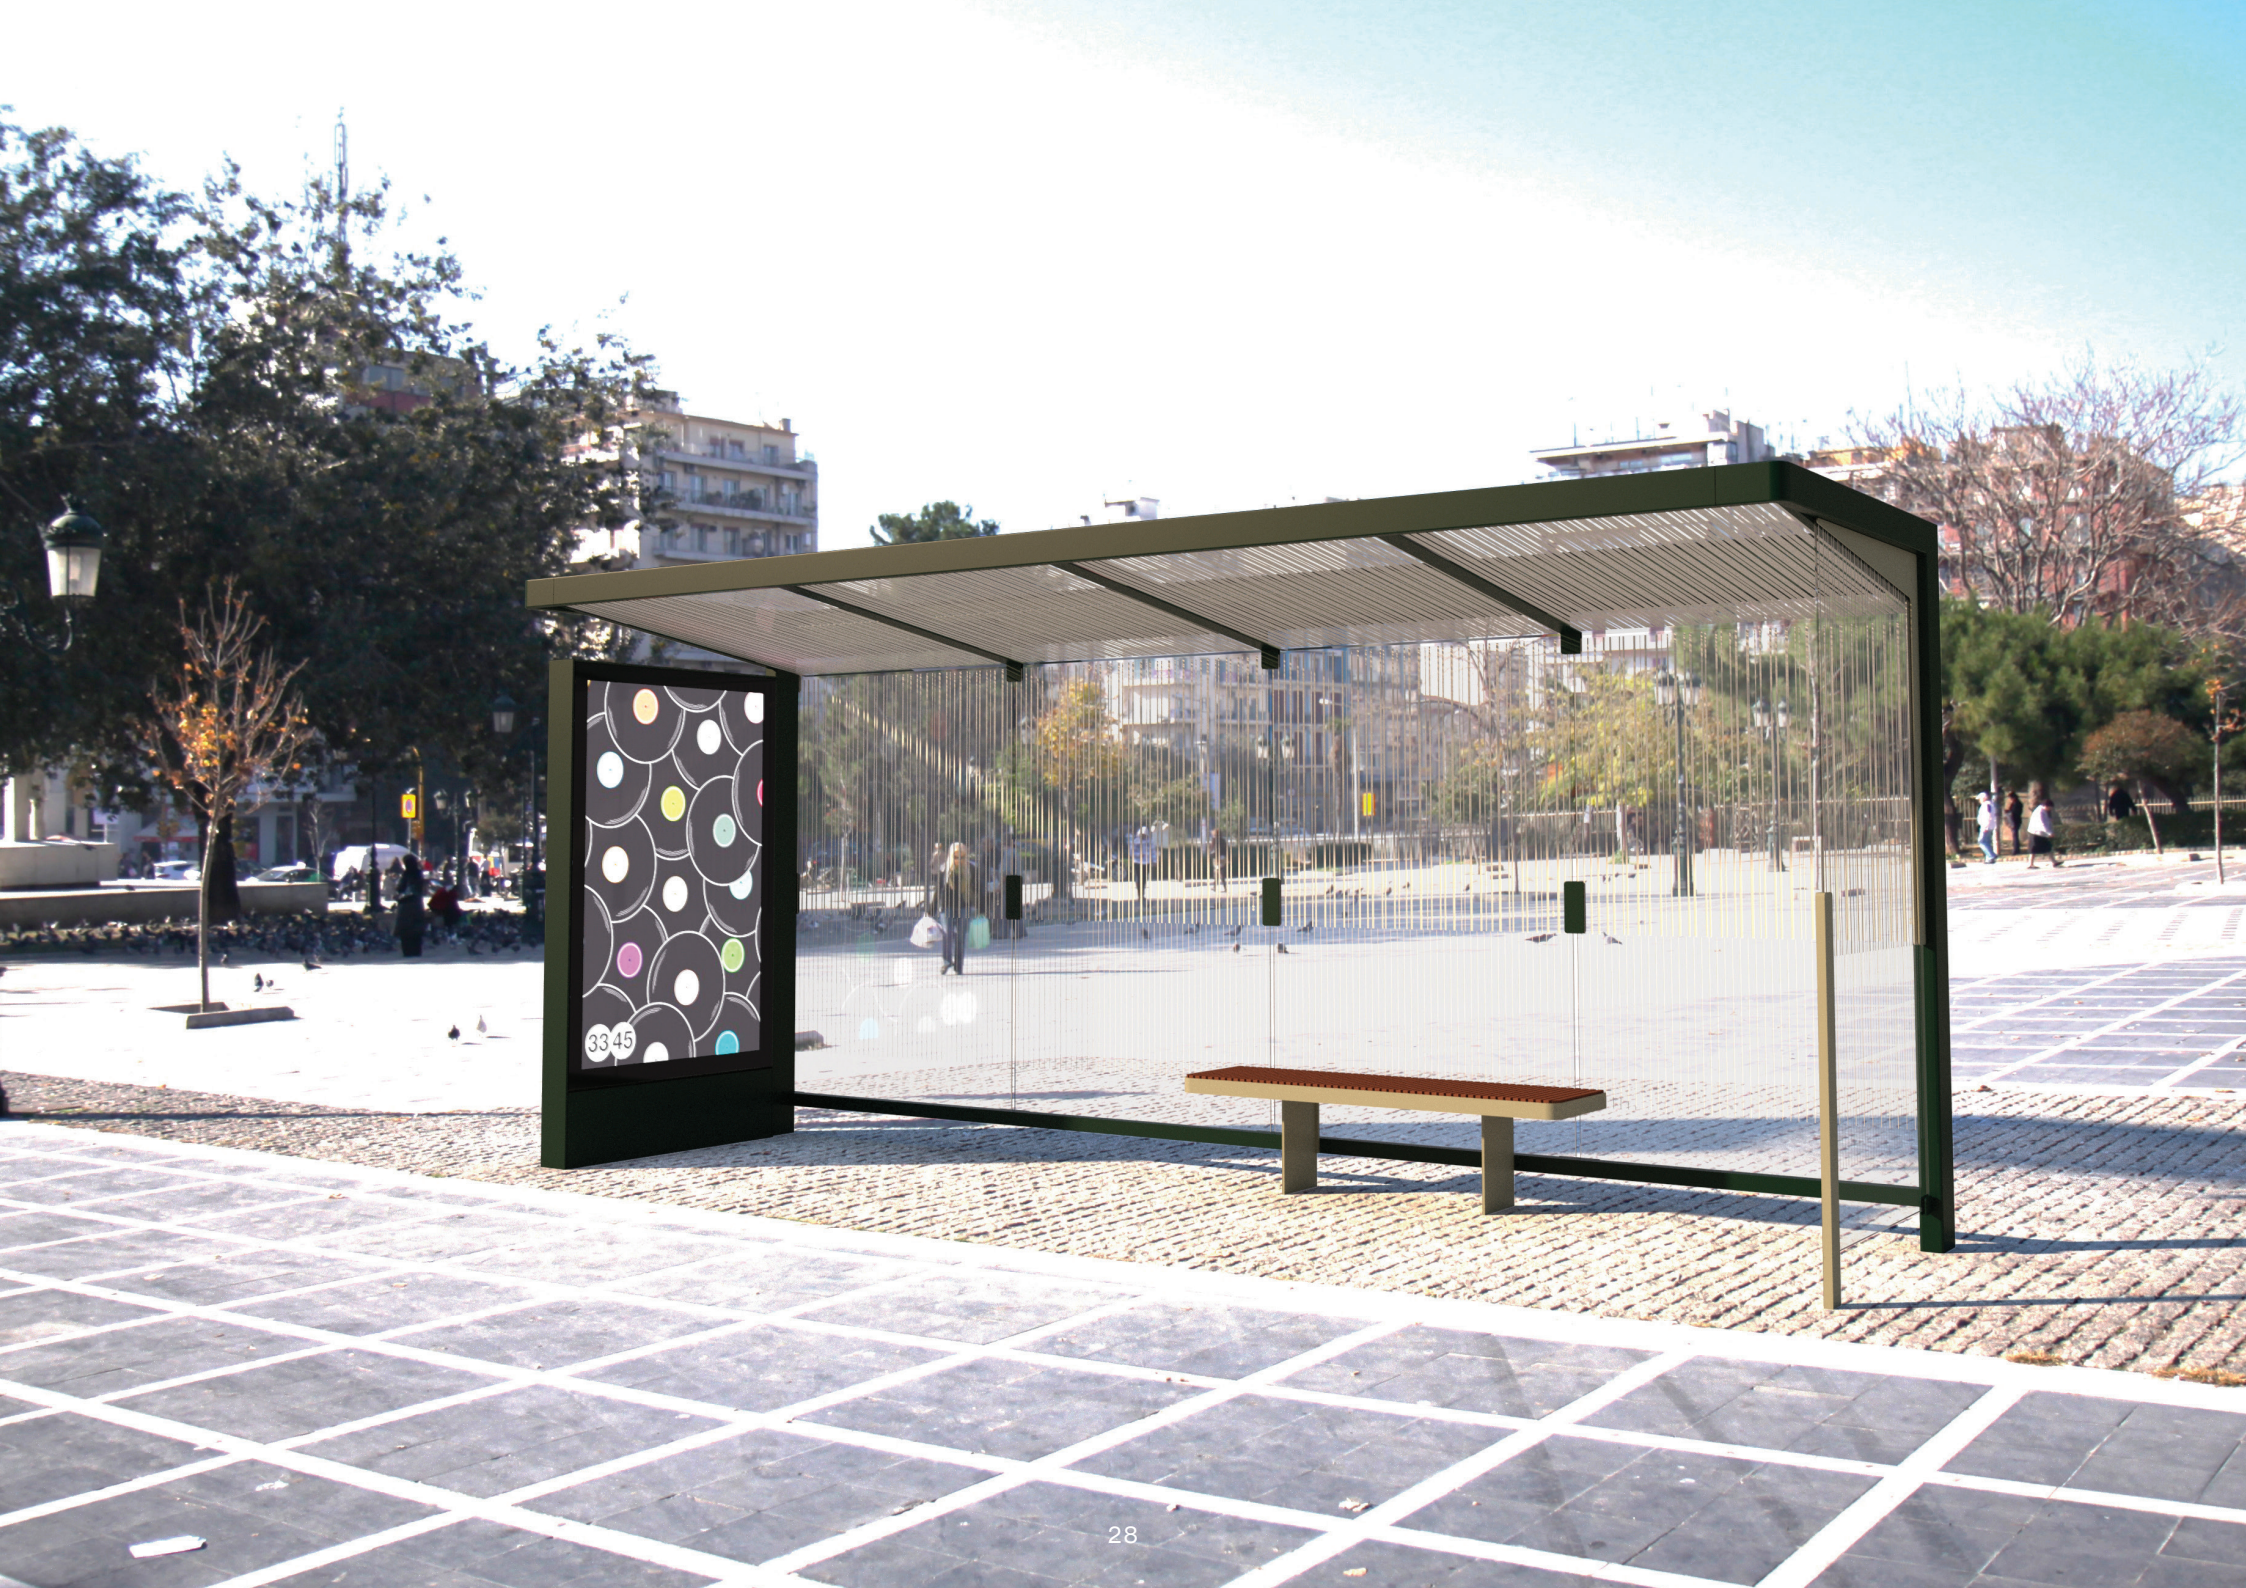

The new bus stop shelter, complementing the Aureo and Geomere series, brings a minimalist design solution. A rectangular frame with an attractive rounded corner detail. Thanks to optional print of all the sides and even the roof you can change the intensity of penetrating light.

Design: David Karásek, Viktor Šašinka

SANIT

**CLEAN DESIGN
FOR CLEAN HANDS**

A column with an embedded function that responds to market developments and the needs of people in the public space. Sensor sanitizer that guarantees up to 30,000 cycles per set of batteries.

Design: David Karásek, Michael Tomalik

CUBY

YOUR WAY OUT OF BOREDOM

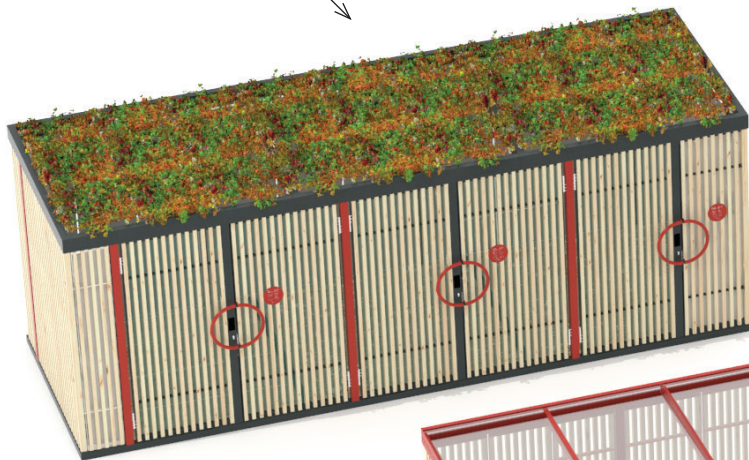

There is no end to our ideas about what can be placed in a cubic structure. We have added a lockable version for a bike shelter, an outdoor cloakroom, a storage room for a garden restaurant. For all the lazy and easy-going there is the "daybed", a lot of comfort in a large enough area.

Design: David Karásek, Viktor Šašínska

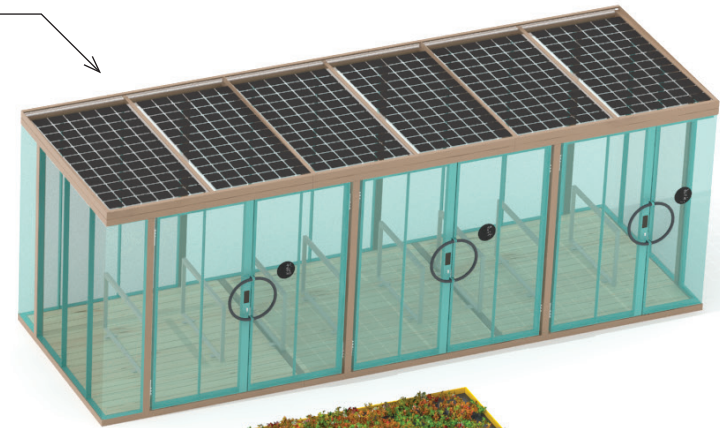

3module bicycle box

Walls made of wooden slats and stretched metal sheet, green roof

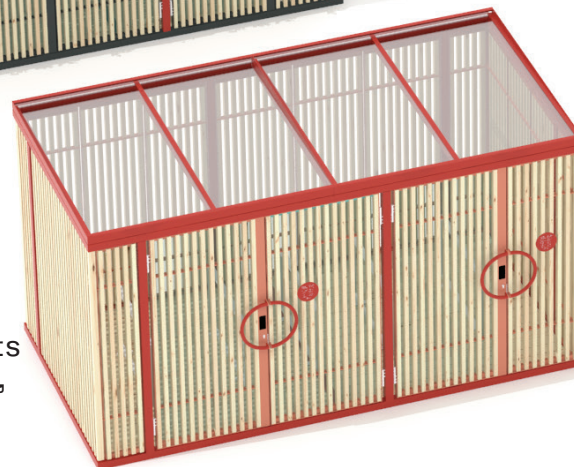

3module bicycle box

Walls made of stretched metal sheet, roof with solar panels

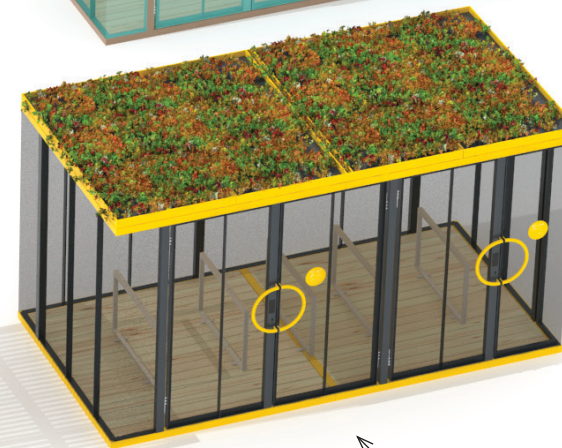

2module bicycle box

Walls made of wooden slats and stretched metal sheet, roof made of safety glass

STACK

FOR RELAX

Popular range of chairs is now even better with new set of waterproof padded cushions in inventive color range and clever attachment system.

Design: David Karásek, Lucia Lehrer
